There is clear evidence that the mandated use of safety seats by children under age four has resulted in fewer child fatalities over the past five years. Compared to the five-year period prior to the passage of laws requiring the use of safety seats, fatalities of children under age four have decreased by 30 percent. Which one of the following, if true, most substantially strengthens the argument above?

- The number of serious automobile accidents involving children under age four has remained steady over the past five years.

- Automobile accidents involving children have decreased sharply over the past five years.

- The use of air bags in automobiles has increased by 30 percent over the past five years.

- Most fatal automobile accidents involving children under age four occur in the driveway of their home.

- The number of teenage drivers has increased by 30 percent over the past five years.

Q 25

25 of 50

Merchandising tactics, which address the effective packaging and positioning of goods, have long been within retailing to stimulate customer demand. Unprecedented changes in consumer buying habits and the escalating sophistication of technology have encouraged the beverage retailers to make up lost ground and to adopt the merchandising philosophy wholeheartedly after years of neglect.

The principal penalty incurred by past caution is that decision-making is now hampered by the scarcity of quality merchandising research. Nevertheless, some retailers have decided to move glass-fronted chilled cabinets to display their beverages. Alternatively, such products are placed on shelves at eye level or, potentially more tempting still, near checkouts.

QUESTION: In supermarkets, goods placed near checkouts sell best.

Although the number of companies actively promoting “customer care” has escalated in recent years, emphasis on such publicity has raised customer expectations, leading to a corresponding increase in complaints. Research published last month demonstrated that only one in twenty dissatisfied customers bothers to complain to the company concerned.

This inertia typically reflects the belief that no one cares about their opinion, either positive or negative, and to a lesser extent, uncertainty about the proper channels to use. The research also suggested that each disgruntled consumer is liable to communicate their discontent to at least eleven other contacts. Those whose complaints are successfully resolved are 50% more inclined to show loyalty.

QUESTION: Banks only hear about a few of the complaints that their customers have.

Q 33

33 of 50

To improve the town's overcrowded school system, the town council has proposed an ambitious education plan to reduce classroom size and make capital improvements – a plan they intend to pay for with an increase in property taxes for homes valued over \$500,000. Although the school system desperately needs improving, the town council's plan should be defeated because the majority of the people who would end up paying for the improvements receive no benefit from them.

QUESTION: Which of the following, if true, provides the town council with the strongest counter to the objection that its plan is unfair?

- Even with the proposed increase, property taxes in the town are well below the national average
- Paying for the school system improvements using existing town funds will result in shortfalls that will force the town into arrears
- The teachers in the town's school system receive some of the lowest salary packages in the immediate area, which is a major cause of attrition
- Smaller class sizes and capital improvements in a school system tend to increase property values in the surrounding community
- A feasibility study has shown that the cost of the improvements will likely be 20% higher than projected

Q 34

34 of 50

To improve the town's overcrowded school system, the town council has proposed an ambitious education plan to reduce classroom size and make capital improvements – a plan they intend to pay for with an increase in property taxes for homes valued over \$500,000. Although the school system desperately needs improving, the town council's plan should be defeated because the majority of the people who would end up paying for the improvements receive no benefit from them.

QUESTION: Which of the following, if true, most strengthens the argument above?

- The town's school system is currently ranked among the worst in the state

- Other towns nearby that have made similar capital improvements did not find that the improvements translated to a better quality of education

- The town will need to spend additional money on an architect's plans for the capital improvements

- An examination of the tax rolls shows that most homeowners in this category no longer have schoolage children

- Some homeowners will delay home improvement projects in order to keep value of their homes below \$500,000.
